

Skybox® Firewall Assurance

Continuous Firewall Compliance, Change Management and Optimization

Firewalls are your first line of network defense. To keep the network secure and policy compliant you must conduct regular firewall audits to check for misconfigurations and conflicting rules that can lead to cyber attacks. Yet, today's complex networks utilize traditional and next-generation firewall technologies, multiple vendors, and thousands of network devices. Given that a single manual firewall audit can take hours or even days, you have a costly, time-consuming administration headache.

Skybox® Firewall Assurance lets you spend less time on daily firewall management tasks while ensuring continuous protection and compliance.

Product Overview

Skybox Firewall Assurance delivers enterprise class performance and scale, coupled with the most comprehensive device support, to enable your IT team to automatically examine rules and configurations with real-time security risk and policy compliance alerts. You can quickly locate misconfigurations, conflicting firewall rules and recommend rule set changes to optimize your overall firewall performance.

- Automatically visualize your firewall architecture
- Pinpoint firewall security gaps that need immediate attention and access for compliance
- Track historical changes for access rules and objects

Key Features

Experience the Firewall Assurance advantage with the most comprehensive feature set and accurate firewall analysis:

Firewall Analysis and Optimization

- Collects and analyzes firewall rules and configurations from multiple firewalls simultaneously, enabling you to locate risky rules and device settings and quickly prioritize urgent security issues within the context of your specific network

Free Trial

Try Firewall Assurance for 30 days.

FIREWALL ASSURANCE

With Firewall Assurance you gain significant business benefits:

Reduce Costs

- Spend less time on daily firewall maintenance and compliance costs
- Reduce infrastructure costs with improved firewall performance

Automate Reports

- Comprehensive reports provide details for management, IT security and operations
- Automate your firewall PCI compliance audits with reports—in minutes

Gain Visibility

- Enhance visibility and oversight of your firewall management process

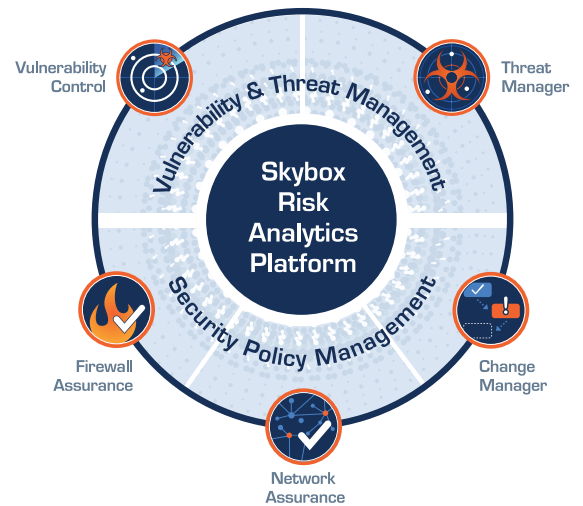

“With Skybox we can easily and effectively accomplish what was previously impossible to complete manually – we have implemented an automated process for audit preparation that is reproducible and successful.”

- Gemalto

HIGHLIGHT FEATURES

- ✓ Supports the most comprehensive list of traditional and next-generation firewall vendors and enterprise workflow solutions (including legacy or custom firewalls through the product's API)
- ✓ Automatically imports firewall configuration data and looks for rule conflicts and misconfigurations
- ✓ Locates shadowed, redundant and unused rules with comprehensive rule usage analysis
- ✓ Discovers access policy violations and shows root cause analysis
- ✓ Provides complete support for next-generation access and rule compliance at the user and application level
- ✓ Provides signature configuration analysis and reporting on Intrusion Prevention Signatures (IPS) in next-generation firewalls
- ✓ Provides comprehensive reports, including firewall audits, compliance metrics, access rule audits, configuration compliance, optimization and cleanup, change tracking, and more
- ✓ Tracks changes made to firewall access rules and objects, and side-by-side comparisons of past, present and future firewall configurations
- ✓ Integrates with Change Manager and third-party tools to close the workflow loop

Skybox's proactive security risk management solutions provide automated, non-intrusive tools that detect, prioritize, and drive remediation of critical risks such as exposed vulnerabilities and firewall configuration errors before exploitation, preventing data breaches and cyber attacks.

- Provides the most comprehensive traditional and next-generation device support/integration
- Improves firewall performance by reducing the size and complexity of firewall rule sets and eliminate overprovisioning

Comprehensive Change Management

- Validate your firewall changes in advance with our patented 'what-if' analysis to avoid introducing potential errors and evaluate risk impact of proposed changes
- Maintain a full history of your firewall rule modifications with continuous change tracking
- Incorporate full change workflow management and track process from initial requests to closure with Skybox Change Manager

Demonstrate Compliance

- Provide evidence of compliance with industry best practices, regulations and custom policies, including PCI DSS, SOX, ISO, NSA, NERC and FISMA with audit reports and compliance scorecards
- Gain proven enterprise class performance and scale that lets you maintain continuous firewall compliance with automated, daily compliance checks

Specifications
